ABOUT INDIRA GANDHI KALA MAHAVIDYALAYA, RALEGAON, DIST- YAVATMAL AND DEPARTMENT OF MATHEMATICS

Indira Gandhi Kala Mahavidyalaya was established by Late Chindhuji Laxmanrao Purke Shikshan Prasarak Mandal, Yavatmal in 2009. This college was blessed by the name of Indira Gandhi, the first lady Prime Minister of India. This college is offering undergraduate courses B. Sc. & B. A. The college is accredited by NAAC with 'B' Grade & affiliated to Sant Gadge Baba Amravati University, Amravati. The main objective of college is to provide opportunity for good quality of higher education to the rural & tribal students of this region. The college is putting more efforts for all-round development of students personality through organizing various academic, co-curricular, entrepreneurship & skill based training programmes. The faculty members of the college are actively involved in project & research work for solving local problems. The college is planning to start PG courses in various subjects & courses which improves the employability of rural & tribal students. Today, college has acquired a prestigious position not only in Ralegaon region, but across the entire Yavatmal district.

The Department of Mathematics was established in 2010 with the major objective of promoting undergraduate studies and research oriented programmes. The department is actively working in the field of General Relativity, Cosmology, Dark energy and Dark Matter, Scalar Tensor Theories of Gravitation and Modified Theories of Gravitations. The faculty members taking extra efforts for creating students interest in mathematics & to reduce the rate of dropout of students from higher education.

ABOUT R. A. ARTS, SHRI M.K. COMMERCE & SHRI S.R. RATHI SCIENCE COLLEGE, WASHIM, DIST- WASHIM AND DEPARTMENT OF MATHEMATICS

R. A. College was established by Rajsthan Education Society, Washim in 1944 & affiliated to Sant Gadge Baba Amravati University, Amravati. The Institution holds pride in being one of the selected few colleges in Maharashtra to have accreditation from NAAC at the 'A' Grade consecutively in 2004, 2011 and 2017. RETIREMENT IS A BLANK SHEET OF PAPER.
IT IS A CHANCE TO REDESIGN YOUR LIFE INTO
SOMETHING NEW & DIFFERENT.

IF BLACK HOLES ARE BLACK, HOW DO SCIENTISTS KNOW THEY ARE THERE?

- A black hole can not be seen because strong gravity pulls all of the light into the middle of the black hole, but scientists can see how the strong gravity affects the stars and gas around the black hole. Scientists can study stars to find out if they are being moved, or orbiting a black hole.
- When a black hole and a star are close together, high-energy light is made. This kind of light can not be seen with human eyes. Scientists use satellites and telescopes in space to see the light.

WHERE DO BLACK HOLES LEAD?

- The simple answer to this question is, as Professor Richard Massey explains, "Who knows?" As a Royal Society research fellow at the Institute for Computational Cosmology at Durham University, Massey is fully aware that the mysteries of black holes run deep.
- Falling through an event horizon is literally passing beyond the veil – once someone falls past it, nobody could ever send a message back," he said. "They'd be ripped to pieces by the enormous gravity, so I doubt anyone falling through would get anywhere."

Need for Research in Relativity and Cosmology

- To reach the places that exist in extreme spaces.
- To find the effects of gravity on the motion of planets and celestial bodies.
- To determine cosmological models of the universe and study the universe that originates.
- We live in this universe and hence we should have a better idea about the origin, structure, physical structure and evolution of the universe.

Cosmology

- Cosmology is the scientific study of the large-scale structure of the universe.
- The main aim of cosmology is to construct models and then compare their results with the present day Universe as observed by astronomers.
- The study of cosmology is based on the cosmological principles which states that the universe is sufficiently large such that Universe is homogeneous and isotropic.

Isotropic Space-Time

Professor Uggla was the first to investigate the most general isotropic, homogeneous and isotropic spacetimes identified in the Robertson-Walker metric:

$$ds^2 = dt^2 - a^2(t) \left[\frac{dr^2}{1-kr^2} + r^2 d\Omega^2 \right]$$

where: $a(t)$ is the scale factor, k is a constant related to a constant value of ρ (or Λ) for values of k being positive, 0 or -1 , according to the universe is closed, flat or open respectively.

Matter bounce scenario and the dynamical aspects in $f(Q, T)$ gravity

A. S. Joshi
Department of Mathematics
Jawahar Institute of Physics and Applied Mathematics
Chennai, India

Abstract
We explore the matter bounce scenario in $f(Q, T)$ gravity.

NOV04 21

September 16, 2021

Physical Statement

- Post-Tomasevic, several potential quantum theories have been proposed for avoiding the singularity. The focus is on the $f(Q, T)$ gravity, where Q is the non-metricity and T is the trace of energy-momentum tensor.
- $f(Q, T)$ can be represented in two equivalent geometric approaches: tetradic representation and connection representation.
- In tetradic representation, the connection and non-metricity tensors, together with the metric, are used to represent the geometry of spacetime and the motion of particles.
- In connection representation, the connection and non-metricity tensors, together with the metric, are used to represent the geometry of spacetime and the motion of particles.
- The investigation is in the case of $f(Q, T)$ gravity in getting a matter bounce scenario and exploring the role of non-metricity and connection in the dynamical system.

NOV04 21

Energy Condition

If all energy conditions (which are all the other physical energy conditions) hold in general, then the null energy condition (NEC) and the strong energy condition (SEC) are satisfied even if the NEC is violated. To see this, we consider the general form of energy conditions in the context of $f(Q, T)$ gravity as:

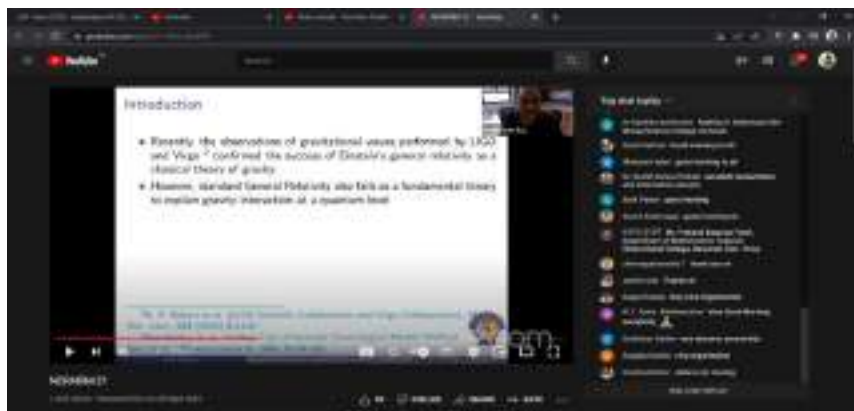

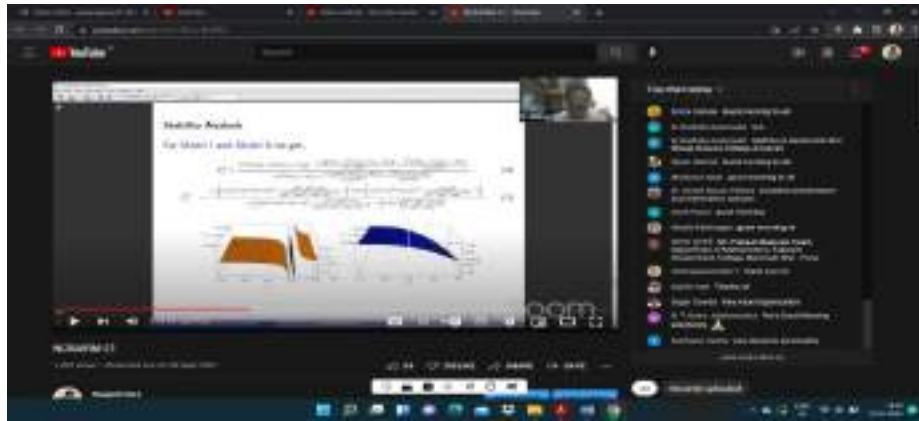

$$\rho - 3p \geq 0 \quad (1)$$

$$\rho + p \geq 0 \quad (2)$$

$$\rho - p \geq 0 \quad (3)$$

$$\rho - 3p \geq 0 \quad (4)$$

NOV04 21

3. $\rho(t) = \omega + \eta \ln(t)$. Now EEs, we constrain the free parameters $0 \leq \omega \leq 20$, and $-0.5 \leq \eta \leq -1$ for present status of the universe.

Figure 2: Energy conditions for $\rho(t) = \omega + \eta \ln(t)$ derived with the present value of H_0 and ω_{DE} .

Plot of CO₂ concentration versus cooling time

The graph shows CO₂ concentration (ppm) on the y-axis and cooling time (min) on the x-axis. The curve starts at approximately 1000 ppm at 0 minutes and decreases rapidly, leveling off around 500 ppm after about 10 minutes.

- From above example, the CO₂ modified atmosphere provides better than phase of water. However, for a similar price of production, there is more oxygen in solution. The water provides only as carbon dioxide.
- And for sugar water is not so big back has carbon dioxide in this stage, when they it before the CO₂ solution.

Introduction

The subject of food preservation that is related to biological deterioration of any product and especially under the general conditions electric, particularly for light and low oxygen level. The main focus is on the application of various preservation methods, such as the use of preservatives, the use of modified atmosphere packaging (MAP), and the use of vacuum packaging. The use of preservatives is a common method of food preservation, but it is not always the best option. The use of modified atmosphere packaging (MAP) is a more effective method of food preservation, but it is not always the best option. The use of vacuum packaging is a more effective method of food preservation, but it is not always the best option.
